

# THE ULTIMATE SUPERYACHT TOY

Barry 2019-11-11

An Italian company, iSpace2o, is developing a craft that is claimed to be able to attain planing speeds on the surface of the sea and to combine this with operating underwater.

DeepSeaker DS1 is a futuristic vehicle that is compact in size yet comfortable inside. Thanks to its size and weight, it can be easily transported on a boat trailer and can be lifted and housed in a yacht's garage. DeepSeaker DS1 is also totally independent and can be launched from any port or dock.

DeepSeaker DS1 can speed on the surface in hydrofoil mode at 23+ knots and dive to 40/50m (touristic level) by means of an inflatable ballast tank under the cockpit. It is also equipped with a digital dashboard, iPad connectors and hydro-phones for sea mammal listening as well as on board Go-Pro cameras. On board electronics and instrumentation are state of the art.

Propulsion is 100% electric green energy. DeepSeaker DS1 safety devices feature: CO2 level alarm, depth pressure reader, emergency buoy with E.P.I.R.B., spare air bibs (1 for each seat), safety belts, GPS, 3D eco-sonar

These combined talents of the advanced craft will make it a very appealing 'toy' for carriage on board a super yacht.
